

March 2024

Realtime Deforestation Monitoring System

19

*Soy and cattle supply chains
Amazon and Cerrado Biomes – Brazil*

Aidenvironment develops **Realtime Deforestation Monitoring (RDM)** reports to engage companies to urge action towards real-time deforestation events and to support civil society and financial sector stakeholders in their efforts to halt deforestation linked to commodity production and trade. In Brazil, the recent increase in deforestation rates is mainly linked to the expansion of Soy and Cattle production within the Amazon and Cerrado biomes.

The RDM 19 report of March 2024 highlights 8 case studies linked to the soy and beef supply chains in the Cerrado and Amazon biomes. The cases include the indication of non-compliance with the **European Union Deforestation Regulation (EUDR)** covering deforestation of native vegetation classified as Forest type, according to the forest definition of FAO, or any kind of illegality in the clearance of any other type of native vegetation after December 2020. The 8 cases present **9,827 hectares of deforestation in Pará, Bahia, and Tocantins states**. The cases cover deforestation alerts detected between January and February 2024, with visually confirmed deforestation events between August 2023 and February 2024.

Together with the confirmed cleared area of native vegetation, the RDM also estimates the linked **CO₂ emissions (above-ground carbon emissions)** according to vegetation type. The 8 cases of the RDM 19 report represent a gross emission of up to **0,75 million tons of CO₂**.

Table of Contents

	Case Studies	Supply chain	Page
1.	Fazenda Princesa do Araguaia Santana do Araguaia (Pará)	Beef and Soy	3

Environmental fines and embargoes			
Embargoes:	Yes	1 embargo issued by the Environmental Agency of Pará (Semas) due to the illegal deforestation of 98,5 hectares in 2011	
Environmental fines:	No	-	-
Ownership and other linked properties			
Ownership:	Green Agropecuária & Reflorestadora (Valdo Henrique Mardegan Favoreto)		
Company group:	Rancho Serrano (registered in Barueri - SP as a cattle trading company) and MPF Agrícola Promoção de Vendas (registered in the property Fazenda Princesa do Araguaia in Santana do Araguaia - PA as a cattle trading company).		
Linked properties:	No linked properties identified		
Supply chain links			
Main Commodities	Beef and Soy		
Level of certainty of a potential trading link to soy trader/ beef processor		Medium / Low	JBS / Bunge
Soy	Warehouses (50 km radius)	11 silos, 3 owned by Bunge	
	Supply chain links & details:	-	
Beef	Slaughterhouses (sourcing from the municipality)	-	
	Supply chain links & details:	Indirectly supplied cattle to JBS (Santana do Araguaia - PA) between 2018 and 2020 through the property Fazenda Laluth (ownership Luciana Virgili Pedrosa Garcia) (Santana do Araguaia - PA)	
Other supply chain links and details:		-	
General comments			

Valdo Henrique Mardegan Favoreto and Rancho Serrano (company) own Green Agropecuária & Reflorestadora, a crop production company registered in Santana do Araguaia (PA). The family, Mardegan Favoreto, also owns Rancho Serrano, which is registered in Barueri (SP) as a cattle trading company. Valdo Henrique Mardegan Favoreto also owns the company MPF Agrícola Promoção de Vendas, registered in the property Fazenda Princesa do Araguaia in Santana do Araguaia (PA) and in Londrina (PR) as a soy producing company. According to the Selo Verde platform, the property Fazenda Princesa do Araguaia has 74 ha of soy and 2,880 hectares of deforestation detected by PRODES (Program to Calculate Deforestation in the Amazon) after 2008 (1).

Environmental fines and embargoes			
Embargoes:	No	-	
Environmental fines:	No	-	-
Ownership and other linked properties			
Ownership:	CAR (1): Adair Basso (1,793 ha)/ CAR (2): Ricardo Laitarte Rodrigues (609 ha)		
Company group:	Adair Basso owns Agropecuária Basso, registered in Magalhães de Almeida (MA) as a soy-producing company.		
Linked properties:	Adair Basso has 1 other property in Porto Nacional (TO): Fazenda São Jorge (190 ha). Ricardo Laitarte has 3 linked properties, all in Monte do Carmo (TO): Fazenda Vovô Cristiano (unknown area), Fazenda Campo Grande (unknown area), and Fazenda Eldorado (unknown area)		
Supply chain links			
Main Commodities		Beef and Soy	
Level of certainty of a potential trading link to soy trader/ beef processor		Medium / Low	LDC / Bunge
Soy	Warehouses (50 km radius)	14 silos, 2 owned by Bunge	
	Supply chain links & details:	Linked property of Adair Basso, Fazenda Santo Inácio (Diamantino - MT) supplied soy to Louis Dreyfus Company in 2019	
Beef	Slaughterhouses (sourcing from the municipality)	-	
	Supply chain links & details:	Ricardo Laitarte Rodrigues directly and indirectly supplies cattle to regional slaughterhouses through linked properties.	
Other supply chain links and details:		-	
General comments			

An expansion area of soy cultivation surrounds the property, but there was no soy production area within the property until 2022 (1). Adair Basso has a valid license for soy cultivation in Fazenda São Jorge (Porto Nacional—TO), valid from November 2019 to November 2023 (2). In October 2023, Basso requested a license for soy and cattle production in Fazenda Estiva (3). Ricardo Laitarte Rodrigues received insurance from Brasilseg and Essor Seguros for soy production in Monte do Carmo (TO) and Fátima (TO) during 2016 and 2021 (4).

General comments			

João Carlos has a license for clearing 318 ha of native vegetation, valid until July 2018, in an unknown property in Divinópolis do Tocantins (TO) (1). In February 2024, Luavel Prestadora de Serviços e Negócios requested authorization for controlled burning for the Environmental Agency of Tocantins, but it is not clear if the authorization is linked to Fazenda Estância Vale Verde (2). In November 2022, the company requested licenses for the implementation of agricultural activities in the property Fazenda Estância Vale Verde (3). João Carlos is a cattle producer in Tocantins, with farms dedicated to fattening animals (4).

General comments			

The property does not have soy cultivation (2022) but is surrounded by soy areas (1). In March 2022, Ricardo Anversa and Denise Anverse sold Fazenda Marília I and II to Agrovitta Ltda, Edwaldo de Paulo Peres and Rafael Augusto Braga Pereira (2). In November 2022, Agrovitta requested authorization to deforested 2,511 hectares in Fazenda Marília I, Fazenda Caboclinha and AEPL, part of the same complex, to implement agricultural activities (2). Edwaldo de Paulo Peres is involved in a land conflict in Campinaçu (GO) and is being investigated by environmental crimes in the same area (3, 4).

Deforestation and fire alert data are the starting point of the analysis for each case study. After confirming the clearance of native vegetation through satellite imagery, each of the cases is analyzed through the Aidenvironment database crossing data from different sources and datasets as described below. Finally, the data is validated by a local partner, and a qualitative analysis of each case is developed using publicly available data.

Deforestation & Fire

We processed deforestation alert data from the INPE/Deter program for both biomes, Amazon and Cerrado. The Global Forest Watch (GLAD alerts) and the Mapbiomas Alertas platforms are alternative sources. The fire alerts are checked in the NASA/Firms platform and processed using the EO Browser Copernicus Sentinel platform. For each selected case, the deforestation is confirmed through satellite images.

Landownership (SIGEF/SNCI/SNCR) and the Environmental Cadastre self-declaration (CAR)

The landownership data is from the Federal Tenure Land systems SIGEF and SNCI, crossing it with SNCR to identify the owner. The land ownership registration on local notary offices is not checked and might differ from the federal systems. The self-declaration for the Environmental Cadastre (CAR) is checked in the Federal System SICAR, including the Legal Reserves and Permanent Preservation Areas (APP), according to the Brazilian Forest Code. For some states, such as Mato Grosso and Pará, it is possible to check the CAR declarant name through the Environmental State Agencies' CAR platforms. It is essential to highlight that CAR is not recognized as official ownership data.

Brazilian Forest Code protected areas

The Brazilian Forest Code defines Legal Reserves and Permanent Preservation Areas (APP) as having mandatory conservation status on private properties. The size of Legal Reserves in private properties varies according to the biome [80% Amazonia biome, 35% Cerrado biome inside Legal Amazon, and 20% other areas]. Permanent Preservation Areas (APP) are those linked to water and soil conservation areas (close to river bases, wetlands, slopes, and high hills.) The Legal Reserve and APP areas considered in this report are those self-declared within the Cadastro Ambiental Rural (CAR) system – Brazil's environmental registration system. In some cases, the CAR was also used to find information on ownership because even if it is a self-declared document, in some cases, it still provides the most recent information on who is operating in a property.

Conservation Areas and Indigenous Territories

Conservation Areas data is from the ICMBio, responsible for monitoring and managing the Officially recognized Natural Reserves according to the National System of Natural Reserves (SNUC – Sistema Nacional de Unidades de Conservação). The SNUC determines the jurisdiction of the area – federal, state, or local government or private owner – and how the natural resources may be used by whom in each of the natural reserves' categories. Indigenous Territories data is from FUNAI, the National Foundation for Indigenous Populations. Indigenous Territories are officially recognized and determine areas where local Indigenous populations have customary rights to access and use the land.

Type of Vegetation and Priority for Biodiversity Conservation

The type of vegetation data is from the IBGE (Brazilian Institute of Geography and Statistics) and Embrapa, consulted through the INPE website. The classification according to the Priority for Biodiversity Conservation is from a study elaborated by the Brazilian Ministry of the Environment, updated in 2018.

Environmental Embargoes and Fines

Embargoed areas and Environmental fines are checked in the database from IBAMA, the Federal Environment Agency. Embargoes are areas where any activity is suspended or unauthorized by IBAMA, oftentimes due to environmental degradation or other crimes such as slavery labor. Properties can be removed from the list of embargoed areas after addressing the problem. Environmental fines are usually linked to regulation infractions and are addressed to the property owner.

Company Group and linked properties

Once the ownership of the property is linked to an individual, we use the SINTEGRA database to check all the registered companies under this individual or group of individuals' names. If a company already registers the ownership, we also check the corporate structure of the company through open-source websites. Once the ownership, linked companies, and corporate structure are defined, we search for other properties registered under the same or similar ownership in the Federal Tenure Land systems SIGEF and SNCL.

Level of certainty of links to soy traders and beef processors

Soy – *High*: the trading relationship between the owner of the property and the trader is confirmed by traders or by the National Supply Company (Conab) trading subsidy programs, or traders have assets (warehouses) within the boundaries of the property; *Medium*: trading relationship with the corporate group, not necessary with the specified property is confirmed by traders or by Conab's subsidy programs; *Low*: the trader is the leading soy exporter in the municipality (Trase platform), or traders have assets (warehouses) within a radius of 50 km from the property.

Cattle – *High*: animal transportation data (GTA) confirm the direct trading relationship between the property and beef processors; *Medium*: animal transportation data (GTA) confirm the indirect trading relationship between the property and beef processors; *Low*: the beef processor is the leading meat exporter in the municipality (Trase platform), or beef processors have assets (slaughterhouse) within a radius of 50 km from the property.

Leading exporters (municipality), warehouses, and slaughterhouses

The data on main soy and beef exporters per municipality is from the Trase platform. The warehouses' location is from the SICARM, and the slaughterhouses' location is from the Ministry of Agriculture. The municipalities' export data and companies' assets' location only indicate a potential trading link, not being used as proof of trading links as explained in the previous item (level of certainty of links to soy traders and beef processors).

CO₂ Emissions

The calculation of CO₂ emissions refers to the "above-ground carbon emissions" according to the cleared vegetation type(s) [Source: 1) [Nogueira et al. \(2015\)](#). *Carbon stock loss from deforestation through 2013 in Brazilian Amazonia*, 2) [United Nations Framework Convention on Climate Change \(2016\)](#). *Brazil's Forest Reference Emission Level for Reducing Emissions from Deforestation in the Cerrado biome for Results-based Payments for REDD+ under the United Nations Framework Convention on Climate Change*. The tons of CO₂ emission is calculated per type of vegetation times the ratio of molecular weight of carbon dioxide to carbon (44/12) times the number of hectares cleared.
